

PREM PATEL

Lead Engineer · Simform

hello@premp.in · premp.in · github.com/pr656d · linkedin.com/in/pr656d · India (working remotely)

SUMMARY

Lead Engineer with 6+ years of native Android development (Kotlin) and software architecture. Led teams shipping BLE/IoT products, an autonomous drone ground-control app with offline maps and route navigation, and a unified communications platform. Runs department-level engineering practice: project templates, CI/CD, code review, mentoring. Builds self-hosted infrastructure and AI-driven, agent-agnostic developer workflows on the side.

EXPERIENCE

Lead Engineer · Simform

2025 – present

- Manage two projects with separate teams — including both Android and iOS teams on one engagement — and review several others.
- Own CI/CD pipelines, multi-environment setup, and product-flavor releases, including a multi-brand white-label app (one codebase, several branded apps with per-brand features).
- Own and delegate the department's Android project template; review the department's open-source library work.
- Run a recurring department technical forum; interview and mentor trainees; sprint planning and agile tracking.

Senior Software Engineer · Simform

Jan 2022 – Jan 2025

- Led development of an autonomous drone ground-control Android app on a custom vendor SDK over radio frequency: live telemetry, offline maps, route planning and in-flight navigation.
- App Lead at an early-stage startup engagement: grew from second Android developer to leading Android + iOS with three developers; owned features from design and backend schema alignment through deployment; designed the team communication system that fixed coordination chaos.
- Code reviewer and architect on a unified communications platform (internal Teams alternative): designed the Android architecture for Jitsi + Matrix event handling and guided two developers.
- Built the department's cookiecutter-based Android project template — database, preferences, key handling, API, logging wired in; zero boilerplate to start a product.

Software Engineer · Simform

Jun 2020 – Jan 2022

- Built the Android side of a smart vending platform — an IoT retrofit turning manual vending machines into app-connected ones; owned the BLE layer (GATT read/write, custom phone-to-machine protocol).
- Authored and open-sourced **SSNeumorphicKit**, a neumorphic UI library for Android (83★) — github.com/SimformSolutionsPvtLtd/SSAndroidNeumorphicKit.
- Worked directly with clients end to end; mentored trainees in Simform's mentorship program.

SKILLS

Android: Kotlin, Java, Jetpack Compose, Coroutines, Room, MVVM + Clean Architecture, BLE, Maps (offline tiles, routing), Gradle, cookiecutter tooling

DevOps & systems: Docker Compose, CI/CD (GitHub Actions), Hetzner, Tailscale, Cloudflare Tunnels, n8n automation, self-hosting

AI tooling: agentic developer workflows, Claude Code, MCP, multi-CLI agent-agnostic configuration, LLM API integration

EDUCATION

B.Tech, Computer Science & Engineering — Parul University

2016 – 2020
